

India's employability just rose to a five-year high. The PGDM is the one degree moving the other way.

"The gap is readiness, not opportunity."

72.76%

PGDM employability, 2026

First three figures: India Skills Report 2026 (Wheebox). CV-scan figure is a widely-cited approximation, not from ISR 2026.

How placement-ready is your first-year PGDM batch — today?

Recruiters are hiring more than they have in 5 years. But for the first time, that expansion isn't lifting every degree equally — the India Skills Report 2026 describes PGDM hiring specifically as shifting "towards applied, cross-domain managerial expertise" and the students who can't show that on a CV are being screened out earlier than before.

Most institutions track placement outcomes. The problem isn't waiting for placement season — it's discovering readiness gaps only once placement season begins, when there's no time left to close them.

So here is what we propose to offer: the **Employability Readiness Lab**.

ONE DAY · FIVE MOVES · A 90-DAY PLAN

- 1 Baseline** — a short questionnaire and CV submission gives every student and the institution, an Employability Readiness Score before the day begins.
- 2 Orientation** — what the market expects right now, benchmarked against your own batch's data.
- 3 CV Clinic** — ATS basics, tailoring to a real job description, a teardown of CVs that won close to ₹1 crore offers and a live review of your students' own CVs.
- 4 Mock Interviews** — live interviews on stage, then every student takes a turn in small groups.
- 5 Individual Development Plan** — a target role, a Plan B, named skill gaps and three dated goals for the quarter.
- 6 Within 48 hours** — every student resubmits an updated CV and IDP. We score each one and send the batch its after-picture.

You already know your placement numbers. Placement is an *outcome*. Career Clarity, Domain Readiness, Professional Brand, Career Capital and Career Evidence are the **leading indicators** behind it — and right now, most institutions only see them after they've already become the outcome.

WHAT YOUR PLACEMENT TEAM WILL KNOW

Who is ready?

A baseline view of the batch, scored across five pillars.

Who needs support?

Students with identifiable readiness gaps — named, not guessed.

Where's the gap?

Career clarity, domain, CV, interview or evidence — pinpointed, not generalised.

Did it move?

Before-and-after scores, for every student — re-measurable every quarter.

WHY THE FIRST QUARTER IS THE LEVERAGE POINT

YEAR 1 → CV BUILT → INTERNSHIP → PPO → FINAL PLACEMENT

The CV is built in the first term. Internship shortlisting follows soon after and internship performance shapes PPO offers. By Year 2, many of the same gaps are already expensive to fix.

WHAT THIS CONTRIBUTES TO YOUR ACCREDITATION DOCUMENTATION

- NAAC** Criterion V (Student Support & Progression) — career counselling records (5.1.2), soft-skill capacity-building (5.1.3) and placement/progression data (5.2.2, 5.2.3) that can support your SSR documentation.
- NBA** Criterion 9 (Student Support Systems) — a documented, re-measurable readiness process for your UG/PG SAR.
- NIRF** Graduation Outcomes (~20% weight for Management) — a structured evidence trail on placement and career progression.

This creates supporting documentation for your reporting process — it does not itself guarantee any score, ranking or accreditation outcome.

✓ Delivered successfully on 19th September 2026 · **202 PGDM students** · a leading business school, Chennai

This isn't another CV workshop or Guest lecture — it's a measurable view of your First year batch's employability, with the Lab as the first intervention. Run once, it's a snapshot. Run every quarter, it becomes your institution's own early-warning system, well ahead of placement season.
